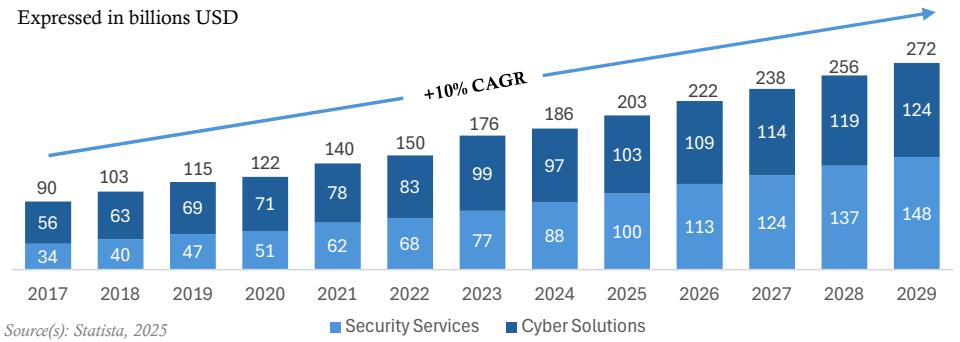
Agenda

1. Industry Analysis
2. Industry Value Chain
3. Sector Comparison
4. Sector Analysis
5. Precedent Business Model
6. Singapore Market Analysis
7. Feasibility Analysis

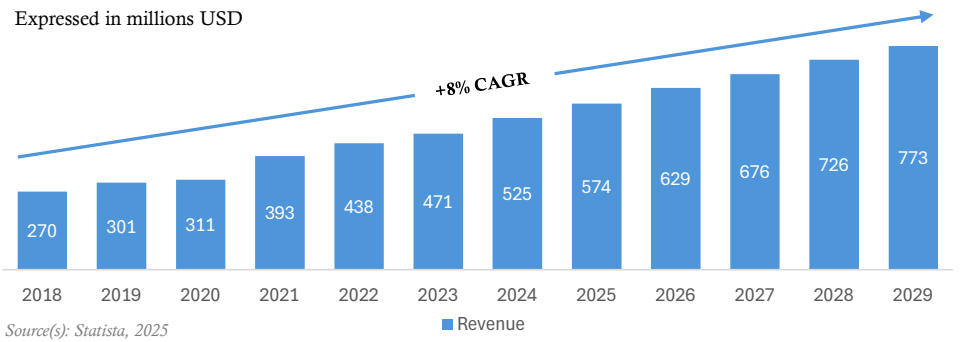
Industry analysis - Cybersecurity

Global Cybersecurity Revenue Growth



Source(s): Statista, 2025

Singapore Cybersecurity Revenue Growth



Source(s): Statista, 2025

Strengths

- Frequent updates to Singapore's Cybersecurity Act provides more clarity to businesses.
- PPPs through SG Cyber Safe highlight government readiness to collaborate with local firms.
- High levels of technological adoption in the local market.

Weaknesses

- Financial constraints prevent SME's from investing sufficiently in cybersecurity.
- There is a shortage of cybersecurity experts in Singapore.
- Trust is crucial in cybersecurity; making it harder for startups to secure initial clients.

Opportunities

- Cybersecurity readiness for most Singapore firms lies in the 'formative' band.
- Singapore lost SGD 1.1 Billion to cybercrimes in 2024.
- Technological development in the industry (AI, ML) necessitate more R&D from cybersecurity firms.

Threats

- Speed of cybercrime innovation may be faster than what cybersecurity firms can handle.
- Established cybersecurity market, new entrants must carve a niche.
- Singapore is a financial and tech hub; firms can be more vulnerable to state-linked cyber threats.

Industry Value Chain - Cybersecurity

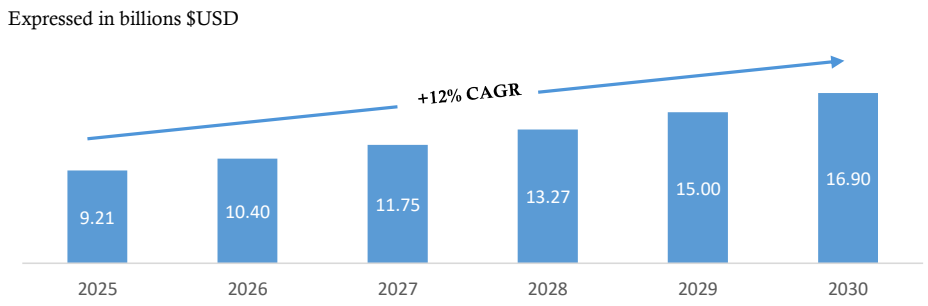
Sector Analysis – Threat Intelligence & Research

Sector Projected Market Size



Source(s): Modor Intelligence, 2025

Opportunities

- Funding for sector hit the **highest level** in three years in the first half of 2025.
- **Sector demand** is driven by increasing complexity of cyberspace and rising geopolitical tensions.
- Cost of data breaches (average $4.88 million) makes the threat intelligence and research sector **valuable**.
- **Valuable to all businesses**, chiefly small & medium-sized enterprises (SMEs) which lack resources to build comprehensive in-house security operations.

Precedent Business Model

	FORTINET	CROWDSTRIKE		JUSTIFICATION
Differentiated Business Model	• Primarily hardware-based network security combined with software solutions. • Real-time AI and Threat intelligence monitoring • Integrated ecosystem of products	• Subscription based SaaS model • Real-time AI and threat intelligence monitoring • 100% cloud-native endpoint protection • Integrated cybersecurity platform		• SaaS models – Better cost efficiency and adoption for SMEs than hardware focused offerings • AI-driven threat detection and response, with a closed feedback loop enables rapid scaling against increasing cyber threat complexities. • Addresses talent shortages, integration challenges with legacy systems, and disinformation issues that SMEs commonly face.
Exclusive Partnerships	• Strong community partnership ecosystem • Broad reach & globally diversified customer base	• Exclusive partnerships with major cloud providers and cybersecurity firms. • Collaborations to enhance threat intelligence and integrate with major enterprise platforms. • Managed services partnership program		• Strategic collaborations with major cloud providers and network services providers broaden reach. • Cross-sector partnerships increase the value of cybersecurity offerings and support secure digital transformations. • Protect -> Attack -> Learn -> Protect
Other Unique Differentiators	• Market leader in the network security market • Built customer loyalty and lifetime value by cross-selling solutions to existing customers. • 1381 global patents & 500+ registered and pending AI-related patents	• Scalable cloud-native solutions • Strong reputation of defending high profile breaches • CrowdStrike AI learns from every attack, creating a virtuous cycle to improve effectiveness for all clients	+	• Cloud-native solution (highly scalable and reduces future hardware investments) • Strong reputation in defending high profile breaches • High patent portfolio shows innovation against evolving cybercrime. • Market leadership highlights the reliability of Fortinet's offerings. • Ecosystem evolves over time with AI and threat detection capabilities, addressing consumer concerns in an ever-changing technological landscape.
Unit Economics* (USD)	• CAC: $601,075 • LTV: $65,832 mm • ARPU: $6,692	• CAC: $794,763 • LTV: $57,482 mm • ARPU: $101,853		• Lower customer acquisition cost (CAC) due to stable customer network. • High customer lifetime value due to stable, long-term customer relationships. • "Sticky" product due to both software and hardware business model.
Revenue Highlights	• Total revenue of $5.96 billion • Total revenue up 12% Y-o-Y • Subscription revenue = 39.5%	• Total revenue $3.06 billion • Total revenue up 36% Y-o-Y • Subscription revenue >90%		• >90% subscription-based revenue, a more predictable, recurring SaaS model • Faster scaling and momentum with CrowdStrike • High visibility into future cash flows

Conclusion: CrowdStrike is the chosen precedent business model.

Feasibility Analysis (PESTEL)

P & L
Political & Legal

Industry
The cybersecurity industry is a national priority, with the SG government introducing new legislation to protect critical infrastructure.

Sector
Recent amendments to the Cybersecurity Act 2018 in May 2024 mandate stricter reporting, creating direct demand for proactive threat intelligence.

Business Model
SaaS model helps clients meet evolving regulatory compliance needs through automated reporting and compliance monitoring.

E
Economic

Industry
High-growth market, projected to reach USD $773 million revenue by 2029 with an 8% CAGR.

Sector
Threat intelligence is a capital-efficient sector, with a history of high-value exits for a lower average funding amount.

Business Model
Subscription-based SaaS model provides predictable recurring revenue, while government grants for SMEs, like the Productivity Solutions Grant (PSG), create a direct path to market.

S
Social

Industry
The market is receptive due to widespread digital adoption, with over 94.6% of Singaporean SMEs using at least one digital solution.

Sector
Threat intelligence is a social necessity, addressing the growing threat from sophisticated attacks like AI-driven phishing and deepfakes.

Business Model
Cyfirma's CAP platform addresses the cyber talent gap by automating complex analysis, making advanced intelligence accessible to all.

T
Technology

Industry
Supported by the push for cybersecurity technology, reflected in the OT Cybersecurity Master Plan effected by the SG CSA.

Sector
Businesses' reliance on cloud, AI, and IoT creates vulnerabilities, making effectiveness at exposing threats essential.

Business Model
SaaS platform allows continuous updates and improvements, keeping technology up-to-date and customizable. Highly scalable business model allows for efficient big data management.

E
Environment

Industry
Industry supports sustainability by enabling secure management of smart grids and smart city infrastructure

Sector
Threat intelligence sector protects critical infrastructure from malicious attacks, ensure smooth operation of green tech.

Business Model
Cloud-based Saas Model is more environmentally friendly than on-premise hardware, aligns with Singapore rising carbon tax ($25 per tonne in 2025)

Source(s): Singapore Cybersecurity Agency of Singapore, Singapore Department of Statistics, Enterprise Singapore, Statista, 2025

Conclusion: Within Singapore, CYFIRMA is a potential winner worthy of investment.

Appendix

TAM SAM SOM

TAM

Focusing on e-2-e threat intelligence in the cybersecurity industry in Singapore, this includes solutions and software's that focus mainly on threat intelligence.

SG Cybersecurity market → 2.28 Billion USD in 2024 (Yahoo Finance)

% of industry that threat intelligence makes up →

Global cybersecurity market size → 182 Billion USD (statista)

Global threat intelligence market size → 13.4 Billion USD (statista)

13.4/182 = 7.3%

2.28*0.073 = 166,440,000 USD

SAM

SMEs (thousands) → (59.3+15.6)/345.1 = 21.7% (Singstat)

166,440,000 * 0.217 = 36,117,480 USD

SOM

In the first year, new entrants to the industry can aim to achieve 5-7% of their target SAM. Since cybersecurity is such a crucial part of business functions, enterprises may feel less inclined to patronize a business without a proven track record. Furthermore, SME's (our target market) will naturally have a lower budget than larger businesses.

36,117,480*0.06 = 2,167,048.8 USD
